DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 2 von 23

## 2 INTRODUCTION

---

### 2.1 LIST OF ABBREVIATIONS

BDMS	Bilddatenmanagementsystem (image data management system)
DH	Datenhaltung (data handling)
DICOM	Digital Imaging and Communications in Medicine
eCRF	electronic Case Report Form
GDPR	General Data Protection Regulation
SOP	Standard Operating Procedure
THS	Treuhandstelle (trusted third party)

### 2.2 OBJECTIVE

This SOP describes the transfer process of DICOM data from the study center to the DZHK infrastructure.

### 2.3 PURPOSE

This SOP is intended for study personnel involved in the documentation of clinical data in clinical systems.

### 2.4 APPLICATION AND TASKS

This SOP has to be used when documenting data in the clinical systems of the DZHK infrastructure.

### 2.5 TERMS AND DEFINITIONS

**DZHK infrastructure** consists of the ethics project, the technical infrastructures and the transfer office.

**Ethics Project** coordinates the drafts of the informed consent forms in line with the study objective and DZHK data use and supports the submission of the ethics applications to the individual institutions.

**Trusted third party (THS)** manages patient consents and is the only entity in the DZHK infrastructure that has knowledge of the assignment of identifying data (study participant name) and pseudonyms.

**Data handling (DH)** operates the system for capturing clinical data in the form of electronic forms (eCRFs).

**Image data management system (BDMS)** is the system for acquiring data in DICOM format and the measured values determined from it.

**Laboratory Information Management System (LIMS)** manages the available biomaterial samples.

DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 3 von 23

**DICOM-Header** is a data set that contains each DICOM file and includes information about patients, device and acquisition settings.

**DICOM-Tags** are individual pieces of information that together form the DICOM header.

**Study-Corelab** is a central lab of a study that evaluates the DICOM data.

## 2.6 RELATIONS TO OTHER SOPs

Data Generating Clinical SOPs	<ul style="list-style-type: none"><li>• DZHK-SOP-C-03 12- electrocardiogram</li><li>• DZHK-SOP-C-08 transthoracic echocardiography</li><li>• DZHK-SOP-C-06 MRT</li></ul>
Review of Clinical Data	DZHK-SOP-P-01 Review of clinical data

## 2.7 DATA QUALITY

**The data quality depends on whether the data is artifact-free, standardized and evaluable.**

The data quality can be increased by de-identifying the data before uploading them in such a way that the evaluators cannot draw conclusions about the patient's previous data records (e.g. patient pseudonym) or a study center (as a clear name or clinic ID) from the content. This FDA recommendation for clinical trials [1] goes beyond the GDPR [2].

# 3 REQUIREMENTS

---

## 3.1 TECHNICAL/ORGANIZATIONAL REQUIREMENTS

- PC with one of the following browsers
  - Browser Google Chrome (75.0.3770 or newer)
  - Microsoft Edge
  - Firefox (68.0 or newer)
- Internet access
  - Port: 80
- For the integrated THS function "ID query based on identifying data":
  - installed certificate of the TTP
- **Access to the BDMS system**
  - Application for registration, change or deregistration of a user access for the DZHK IT infrastructure <https://service4studies.dzhk.de/en/studienzentren/it-nutzerzugang/>  
→ Role of the user in BDMS
  - Access data and further information will be sent by the BDMS-project (contact [bdms@dzhk.de](mailto:bdms@dzhk.de)), a password link will be sent automatically by TrialComplete system

DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 4 von 23

### **3.2 REQUIRED DATA**

Exported Data in DICOM file format

### **3.3 INFORMATION NEEDED**

Subject ID (case number or BDMS pseudonym)

### **3.4 STAFF**

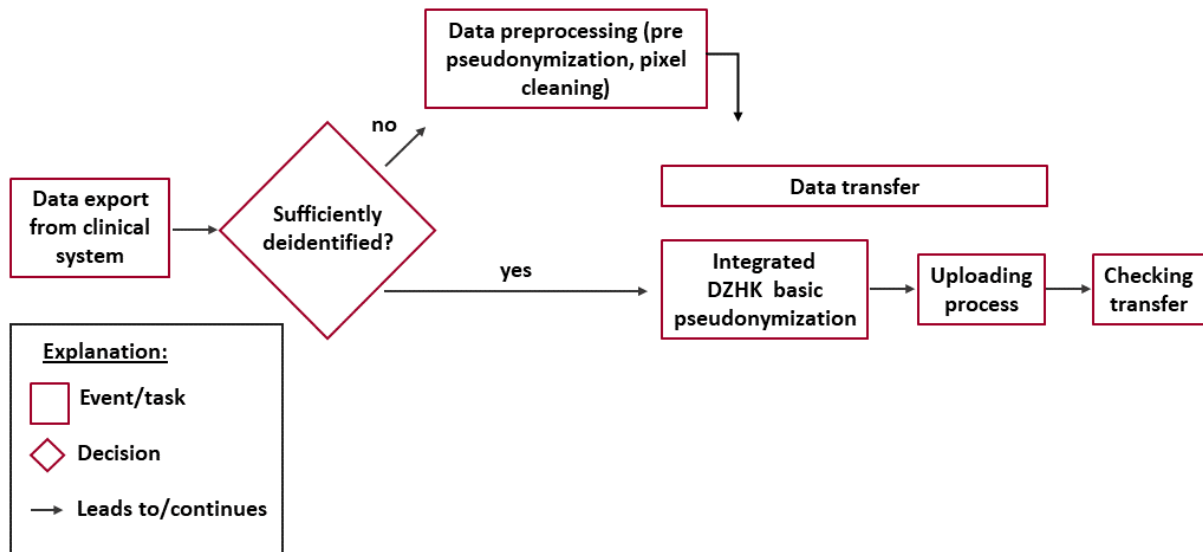

Data transfer can be performed by clinical study assistants after they have been instructed in the SOP or have completed a training.

DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 5 von 23

## 4 PROCEDURE OF IMPLEMENTATION/WORK PROCESS/WORK STEPS

### 4.1 PROCESS-FLOW-CHART

**Figure 1** shows the sequence of the individual work steps from data export to checking the data transfer. The individual steps are described in the following sections.

*Figure 1: Process for data export*

### 4.2 DATA EXPORT FROM CLINICAL SYSTEMS

For the export from the clinical systems, only recommendations for the local implementation can be given here:

- If possible, record the data without burned-in image data and use the anonymization functions of the recording device if possible. Both will may save you the step of data pre-processing.
- **Export the data as soon as possible.** At some centers, some PACS systems are set up in such a way that data is compressed after a certain period of time. Some software solutions can only deal with this to a limited extent.
- If possible, avoid the step of burning the image data to DVD. Alternatives are the export to USB media, network directories and retrieval from the PACS using specific tools (e.g. DICOM-Cleaner [3]).
- **Also use the contacts of the BDMS-project team for specific advices ([bdms@dzhk.de](mailto:bdms@dzhk.de)).**

DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 6 von 23

### 4.3 DATA PRE-PROCESSING

Pre-processing is necessary to remove information from the data that is not automatically removed in the following process step (see section 4.4 „Data Transfer“). This includes information burned in to the pixel data of the image or data in the DICOM header (additional image information in the file) that is not automatically changed in the upload process (see section 6.3 „DICOM-Pseudonymization Profile of the DZHK (Updated: 14.11.2017)“ ).

**This data pre-processing must be tested in advance with the study corelab/quality assurance (if available),** to check the readability of the data processed in this data transfer.

#### Removing burned-in data

Image data may contain "burned-in" data of the study participant (name, date of birth) or data about the study site (study site, department, treating physician). **These must be electronically redacted ("blackout") manually using certain tools (e.g. DICOM Cleaner).** Table 1 lists typical places where such data can be found.

Table 1 Possible places for burned-in image data

Modality	Typical locations for burned-in data
Computed Tomography	<ul style="list-style-type: none"><li>radiation dose report (usually the last image of a series)</li></ul>
Echocardiography	<ul style="list-style-type: none"><li>Status bar (at the top of the screen)</li></ul>
Cardiac catheterization	<ul style="list-style-type: none"><li>radiation dose report (usually the last image of a series)</li></ul>

#### Removing identifying data from the DICOM header

The device-specific anonymization tools should primarily be used if possible. A pseudonymization process applied in the DZHK basic profile during the upload containing the basic profile of DICOM Supplement 142:2017 is automatically.

**Any further removing that goes beyond this must be carried out using additional tools.**

Many centers offer de-identification functions for export. There, in particular, the data should be checked for burned-in data. A license-free option is the DicomCleaner tool, which removes data per DICOM header group. Technically experienced users can also use their own scripts - e.g. MatLab or Python - to remove/replace values of individual DICOM tags.

**The team of the BDMS ([bdms@dzhk.de](mailto:bdms@dzhk.de)) can give you also advises here.**

### 4.4 DATA TRANSFER

Pre-processed data will be uploaded to the BDMS. During the upload process, certain DICOM fields of the header information are deleted/replaced from the data (see section 6.3 „DICOM-Pseudonymization Profile of the DZHK (Updated: 14.11.2017)“).

**In the study center, no values need to be entered in the eCRF in the BDMS,** since the eCRFs are filled out by central analysis units (CoreLabs).

DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 7 von 23

The upload contains the following steps:

- 1) Open a suitable browser (see section 3.1 *Technical/Organizational* )
- 2) Log in with your username on <http://bdms.dzhk.de>
- 3) Check whether maintenance or other faults are pending in the welcome screen (Figure 4)\*
- 4) Select „Data Entry & Processing“ (in the left sidebar)
- 5) Select the study (in the upper header element)
- 6) Open the visit plan (with button „Select Subject“ Figure 6)
- 7) Select the study participant via variant A „Select by name“ (Figure 7) or variant B „Search by ID“\*
- 8) Open the visit (Figure 9)
- 9) Select the "Web Upload" button (bottom bar) (Figure 9)
- 10) Select DICOM files via „Drag-and-drop“, „Select Folder“ or „Select Files“\* (Figure 10)
- 11) Wait for the upload process or start further parallel uploads\*
- 12) Confirm the upload by pressing the button „Confirm“ (Figure 10) or wait for the 1 minute countdown
- 13) Check reports, if applicable

(See appendix for a leaflet: 6.4 DZHK – BDMS – DICOM Upload - User Guide)

Notes on the steps marked with the \* symbol:

Step 3.) „Maintenance window“

The “Welcome Screen” announces maintenance windows for the BDMS. During the maintenance windows, uploads are usually canceled and uploads should be avoided here. Times are given in Coordinated Universal Time (UTC). To convert, add 1 hour to get Central European Winter Time or +2 hours to get Central European Summer Time.

Step 7.) „Selection of the study participants“

- Variant A „Select by name“:  
For this method, the certificate of the trusted third party must be installed on the computer.

- 1.) Enter last or first name
- 2.) Check that the correct patient is displayed

→ Forwarding to the visit plan

If there are any error messages, please also contact the trusted third party ([ths-dzhk@uni-greifswald.de](mailto:ths-dzhk@uni-greifswald.de))

Step 10.) „Selection of DICOM files“

Here are two examples where browsers might encounter problems:

- For Windows: Here you should select files from paths that start with drives (“S:\directory”). UNC paths - like \\{server}\{directory} - can cause problems.
- The unsupported browser - Internet Explorer - is incompatible with the "Select Folder" function.

DZHK-SOP-P-02 DICOM-Export	Valid from: 01.10.2020	
Version: V1.0	Author: J. Schaller, R. Lorbeer	Page 8 von 23

Step 11.) „Start of several upload processes“: It is possible to start further uploads to an ongoing upload process in order to enable a higher data throughput.

## 4.5 CHECKING THE TRANSFER

After the upload has been confirmed („confirmed“), users will receive an upload confirmation via email (Figure 2), an automated quality check (Figure 3) and a message in the inbox (Figure 5).

### 4.5.1 Checking the upload confirmation

The upload confirmation should be checked,

- whether the number of generated DICOM documents is correct:
  - a. For ultrasound images, the number of DICOM files uploaded should match the number of DICOM documents created
  - b. MRI and CT consist of series of images, so that several images can be combined into one DICOM document
- whether incorrect files occur

Notification	Reason, Solution
Invalid DICOM file	It is not critical for the DicomDIR file and other non-DICOM files. If it is DICOM data that should be uploaded, please contact <a href="mailto:bdms@dzhk.de">bdms@dzhk.de</a> .
Failed to upload DICOM file with modality „XX“ due to server error.	The flow of data was interrupted here and the file was not uploaded. Repeat the upload here at a later date or contact support <a href="mailto:bdms@dzhk.de">bdms@dzhk.de</a> .

#### 4.5.2 Checking the automatic quality check

In addition to the upload confirmation, another e-mail with the results of an automated quality check by "Trial Complete" is sent and filed as a notification. This "Automated document quality check status" contains the following information (Figure 3):

- Name of the study
- BDMS ID of the patient
- Name of the visit
- Upload time compared to the planned upload time window
- Successful image data pseudonymization
- Correct modality of image data
- Number of total image data uploaded per modality compared to planned documents

**The basic quality criteria (required image modalities per visit, minimum and maximum number of image documents to be uploaded per visit, upload time window after examination visit) are defined individually for each study in the study design of the BDMS. The basis for this is the study protocol and the specifications by the study coordination. Timely recording has proven to be a quality criterion for clinical studies. For the upload times, the time windows ("Upload time window check") of two months after the patient visit apply (according to the regulations from the DZHK-SOP-P-01).**

Properties that meet the quality criteria are highlighted in green in the e-mail (notification) - Properties that do not meet the quality criteria are highlighted in red (Figure 3). This gives the user and the QA manager a quick overview when reviewing the automatic e-mails (notifications) as to whether the image data upload was within the quality criteria or not. **If the quality criteria are not met, the user can react accordingly (user: optimization for the next image data upload, QA officer: Notification to user).**

### 6.3 DICOM-PSEUDONYMIZATION PROFILE OF THE DZHK (UPDATED: 14.11.2017)

This appendix stores the DICOM pseudonymization profile that is applied to each upload in BDMS.

The profile is based on the recommendations of the National Electrical Manufacturers Association (NEMA) and follows the abbreviations listed there.

The following action codes are used in the table:

- D – replace with a non-zero length value that may be a dummy value and consistent with the VR
- Z – replace with a zero length value, or a non-zero length value that may be a dummy value and consistent with the VR
- X – remove
- K – keep (unchanged for non-sequence attributes, cleaned for sequences)
- C – clean, that is replace with values of similar meaning known not to contain identifying information and consistent with the VR
- U – replace with a non-zero length UID that is internally consistent within a set of Instances
- K/U – keep, if not possible, changed to internally consistent within a set of Instances

## 6.4 DZHK – BDMS – DICOM UPLOAD - USER GUIDE

1) Open the BDMS with a suitable browser	<a href="http://bdms.dzhk.de">http://bdms.dzhk.de</a>
2) Log in with username and password	
3) Select "Data Entry & Processing" in the left sidebar	
4) Select a study	
5) Open the patient selection via "Select Subject" in the upper right corner	
6) Select a patient using "Search by PSN" or "Search by Name"	
7) Open a visit (with imaging) in the visit plan	
8) Press the button "Web Upload" (no software required)	
9) Select the DICOM files via "Drag-and-Drop", "Select Folder" or "Select Files"	
10) Wait for the upload process or start another parallel upload	 If you click cancel, all uploads are canceled, no matter if they are in progress or finished. Finished Uploads will be auto confirmed after 1 minute.
11) Confirm the upload by pressing the "Confirm" button	
12) Check the upload notification in your e-mail inbox	<a href="mailto:no-reply@trialcomplete.com">no-reply@trialcomplete.com</a> New document(s) uploaded for subject ...
13) Check the automatic quality check of the image data in your E-Mail mailbox	<a href="mailto:no-reply@trialcomplete.com">no-reply@trialcomplete.com</a> Automated document quality check report for ...
14) In case of problems please contact	<a href="mailto:bdms@dzhk.de">bdms@dzhk.de</a>
